Well, if you are still not convinced then you need to read this post from first to last. So check out what is html. We have added a summary of what is html for your reading ease. What is HTML? HTML is a language that helps you to present the source code or the format of the source code to the users. It helps in giving the look and feel of your webpage or application. You can actually describe the form of your web page or application with the help of HTML. Now we are going to discuss the type of HTML files. HTML 4.01 HTML 4.01 is an evolved version of HTML and is the most popular version of HTML. HTML 4.01 is a language and the author of the language is called World Wide Web Consortium. So you can also consider HTML 4.01 as the official version of HTML. Now HTML 4.01 is supported by all the major browsers. HTML 5 The current version of HTML is HTML 5. It is designed to be more suitable for the present generation of browsers and the best part is that it is supported by all the major browsers. HTML 5 has an interactive feature called the Drag and Drop. So the website owner can easily arrange and drag the HTML elements on to the place where they want to arrange. The user can also drag and drop the HTML elements like text, images, style, etc.

---

HTML5 is based on the XML format and its author is World Wide Web Consortium. So you can also consider it as the official version of HTML. Now, HTML 5 is supported by all the major browsers. It has been introduced to the market in the year 2009.  
Basic Principles of HTML To create a perfect HTML page, you have to have 82157476af
